---

## SUMMARY

Python and Django engineer with 6 years of experience, spanning accounting systems, e-commerce platforms, and Odoo applications. Owner of three major platform migrations and a code-quality initiative taking 25+ modules to 100% coverage, with a bias toward readability, testing, and maintainability over premature optimization. Looking for a small-to-mid-sized engineering team where reliability is valued.

## EXPERIENCE

### **Lead Developer** | *Simplified Computers* | Champaign, IL

Aug 2024 – Present

- *Technology used:* Python, Odoo, JavaScript (OWL), PostgreSQL, unittest, coverage, GitHub Actions, Sentry, Odoo.sh, Cloudpepper, Vultr, Flxpoint, Icecat, Etilize, Claude Code, Sentry MCP, Atlassian MCP
- Led Odoo 18→19 migration across 71 modules: OWL framework updates, pre-migration SQL scripts via upgrade-utils, and enterprise/community reconciliation.
- Migrated Odoo 17→18 across 23 modules solo, including Payment Transaction customizations and POS OWL migrations.
- Instrumented Sentry error-tracking for Odoo (backend and frontend): config-driven initialization, global frontend JS error handlers, release tracking via CI, and noise filtering for interrupted connections.
- Overhauled GitHub Actions CI with aggressive caching, inline PR coverage feedback, and parallelized test jobs.
- Piloted Claude Code with the Sentry Odoo 19 upgrade, extending the OCA module with JS Loader injection and session replay: 70+ AI-assisted merged commits in 2 months.
- Generated a Python REST client from Flxpoint's OpenAPI spec and integrated it into Odoo to drive listing and inventory sync.
- Shipped a Flxpoint reporting model and dashboard from scratch: 1,550 cron reports aggregated in 2 months across 199K products fetched, 262K linked, 528K stock updates, and 342K image updates.
- Synced Flxpoint's multi-channel marketplace listings to Odoo's internal product catalog, keeping stock and pricing consistent across sales channels: 108K+ listing variants linked to 589K+ Odoo product variants.
- Integrated Icecat/Etilize product enrichment, populating 69K+ products with marketing text and exporting 28,866 PDFs as downloadable product attachments.

### **Software Developer** | *FarmAfield* | Remote

Sep 2021 – Aug 2024 (+ consulting Feb 2025)

- *Technology used:* Python, Django, HTML, PostgreSQL, Selenium, Docker, CircleCI, CapRover, Google Sheets, ACH banking
- Designed the transaction-generation layer of FarmAfield's accounting atop double-entry primitives, translating business events into journal entries across 18 transaction types. Generated 42,000+ transactions totaling \$63M+ over 4 years.
- Authored the Chart of Accounts (web view, Excel download, QuickBooks IIF export) and annual 1099-MISC tax system (PDF generation, threshold-gated delivery) across 6 tax years, 45 TINs encrypted at rest.
- Spearheaded the code-quality initiative: 25+ modules to 100% coverage, surfacing numerous latent bugs.
- Led major platform migration without outages: Python 3.7→3.10, Django 3.2→4.1, Ubuntu 18→22, and Node 12→18.
- Built SDIRA (self-directed IRA) account linking and automated reporting via pygsheets with service-account auth: daily ACH, per-offering, and per-customer sheets covering 159 offerings and 3,129 customer wallets.
- Enhanced the ACH pipeline, supporting \$12.1M across 4,000+ transactions and 1,000+ NACHA files.

### **Software Development Intern** | *FarmAfield* | Remote

May 2020 – Aug 2021

- Shipped the COVID-era CFAP relief adjustment system end-to-end: customer-facing form, transaction engine, profit-sharing logic, and admin interface. \$150K paid across 685 investor credits to 66 accounts, zero manual intervention.
- Overhauled admin deposit system into a multi-source pipeline, processing \$1M+ across 66 admin-originated entries.
- Contributed to the Django 1.11→2.2 upgrade: removed deprecated django-phonenumbers-field, ported django-forms-builder to be 2.2-compatible, and repaired migrations.

## EDUCATION

**Parkland Community College** | *Associate of Science in Computer Science* | Champaign, IL

Aug 2021
